Schoutenstraat 30, 3641 HW Mijdrecht, Netherlands

The family business has initially been founded in 1882 and has always been specialized in hardwoods. At this moment of time we are concentrating us on Brazilian, Bolivian and a little less on Peruvian hardwoods as well. Moreover we co-produce higher qualities KD Siberian Larch and sell some hardwoods from Sierra Leone.

Species : We can offer You more than 50 hardwood species and provide You with technical details about these lumbers, issuing such technical leaflets ourselves.

Quality : Our parcels are inspected before shipment. Still we prefer to sell FAS/Prime, so practically 4 sides clear of any defects, and allowing no sap nor heart.

Moisture: We can offer You shipping dry, AD and KD lumber.

In case customer orders KD:

- Order will only be given to those producers, whose technical kilning-equipment has been
- approved by us and have proofed their ability to kilndry our timbers.
- Almost all of them have a Dutch Brookhuis FMW moisture meter with 45 & 60mm isolated needles, provided by ourselves, and have been trained to measure the MC very seriously.
- All of our producers use steam-kilns, which in our opinion is the best for tropical hardwoods.

Machined lumber: Deckings, 1 or both faces profiled for garden-timbers is no problem at all. We can also offer You exterior cladding-boards, profiled scantlings for window-frames as well as Solid Finger-Jointed calibrated windowscantlings under the Dutch Komo-Kvt-certificate.

Legality: We are specialized in FSC certified lumber, which actually represents about 65% of our sales, but we can also offer non-FSC timbers. Such non-FSC lumber is accompanied by documentation from the country of origin, proofing it's legality and authorization for exportation, according to the laws of the country concerned.

What makes us different:

Apart from keen prices and reliable deliverytimes, we have an extensive knowledge of the various species, the local market-conditions and quality-requirements for the various uses of these timbers.

We invest in knowhow and equipment for our producers. We assist them and participate in the cost of their certification.

At this moment we are the only one, who can offer You Solid finger-jointed timber, produced in South America with the Dutch KOMO-Kvt Certificate. We have participated in Forest- and Production TLTV certification and in 2010 we are able to help our producers to prepare for FSC certification without even using costly external consultants.
